

GENERAL INFORMATION

PA Non-slip coating is a VOC exempt, environmentally friendly solvent based hydrophobic coating specifically formulated for maximum performance on PVC, rubber and similar surfaces. PA Non-slip is UV resistant and highly durable. It creates an extremely hydrophobic surface that resists the attachment of marine organisms, dirt, debris, ice, snow, water, etc. Once treated, the self-cleaning surface maximizes performance while minimizing ongoing maintenance. When wet, PA Non-slip creates a smooth Wet-Grip non-slip surface perfect for areas requiring traction but that are often exposed to water. PA Non-slip is the perfect solution for inflatable topside marine applications where traction is required in wet environments.

Proudly manufactured in the USA
